

THE COMPETITION'S PASTA

ITALIAN DURUM WHEAT SPAGHETTI
SENATORE CAPPELLI FIVE-TOMATOES SPAGHETTI

INGREDIENTS

200g SGAMBARO
SENATORE CAPPELLI
ORGANIC SPAGHETTI

2 SAN MARZANO
TOMATOES

4 PICCADILLY
TOMATOES

4 BLACK
TOMATOES

HALF A STEM OF
CHERRY TOMATOES

HALF A STEM OF
CUBELLO TOMATOES

GARLIC

1 GLASS OF
WHITE WINE

50g OF GRANA
PADANO CHEESE

EXTRA VIRGIN
OLIVE OIL,
SALT AND PEPPER

RECIPE FOR TWO PEOPLE

Clean all tomato varieties and cut them into chunks.
Fry two cloves of garlic in three drizzles of oil and add the tomatoes starting from the San Marzano, then the tougher ones and finish with the datterini. Sauté with white wine.

Cook over medium heat for about half an hour, covering with a lid but not air-tight and adding a little hot vegetable broth or pasta cooking water if the sauce dries out too much. Meanwhile, cook the spaghetti in plenty of salted water.

Drain them al dente and toss them into the sauce, adding a drizzle of oil and a few leaves of fresh basil torn by hand.

Serve by finishing the dish with a generous amount of freshly grated Grana Padano cheese.

WHAT THE DIETICIAN SAYS

This dish is the pride of Italy throughout the world. It seems easy to make but it is truly good - in flavour and for health - only if prepared with high quality raw ingredients.

Senatore Cappelli wheat has been an excellence of Italian agriculture since the early twentieth century; the Sgamaro selection is 100% Italian, organic and assures the characteristics of the original grain, to be counted among the ancient grains as it was grown before modern industrial processes. Particularly tasty thanks to its aromatic and persistent flavour, it is a low protein grain and therefore it is always processed for longer and more delicately, at low temperature.

Its properties thus arrive intact on the plate: slightly less rich in carbohydrates, but with a greater vitamin and mineral salt content than the average of the other durum grains.

The **tomato**, one of the many vegetables imported from the Americas, has established itself as the staple food of the Mediterranean diet, along with aubergines and peppers. Rich in water, with an extremely low calorie count, it contains moderate amounts of vitamin B, ascorbic acid, vitamin D and, above all, vitamin E, an antioxidant.

Among the minerals: iron, zinc, selenium, phosphorus and calcium which, acting in synergy, provide remineralising and antioxidant properties.

Due to the presence of organic acids, the tomato stimulates salivary and gastric digestion and can sometimes cause irritation or heartburn. The fibre, concentrated in the peel, stimulates intestinal motility, while its diuretic properties make it an excellent refreshing and purifying agent, useful for eliminating excess waste, a property enhanced by the presence of sulphur with significant detoxifying properties.

Extra virgin olive oil provides monounsaturated fatty acids, vitamin E and polyphenols. It also contains oleocanthal, a substance with significant anti-inflammatory properties and oleuropein, a substance with antihypertensive activity.

Grana Padano cheese enriches the dish with precious proteins with a high biological value, it is rich in branched amino acids that can provide immediate energy to the muscles during exercise, repair muscle fibres after exertion, promote the increase in lean mass, buffer the lactic acid and provide a speedy physical and mental recovery. A portion of 50 g of Grana Padano cheese can replace 150 g of meat or 2 eggs.
